Software Engineering Applications

ADLAM Films, WordPress Developer - AdlamFilms.com
Sample of my WordPress agency work.
- Developed fully responsive WordPress theme from Photoshop mockup.
- Setup SEO and provided WordPress training for client.

Custom Geofilters, Founder & Full Stack Software Engineer - CustomGeofilters.com
Application for users to customize and purchase Snapchat Geofilter designs and services.
- Developed full stack application with AngularJS front end and WordPress backend.
- Utilized Fabric.js to build an in-browser graphic template editor.
- Integrated external API's such as Stripe, Google Maps, and Google Cloud Storage.

MixApe, Full Stack Software Engineer - Github
Real time collaborative YouTube video playlist and player.
- Built backend with Express/MongoDB and designed custom React front end with Sass.
- Integrated Socket.io on frontend and backend to make components update in real time.
- Implemented MobX to easily access authenticated user data across app components.

Professional Experience

Waycaster Works, Freelance Developer & Entrepreneur   2016 - Present
- Develop responsive websites and mobile apps through freelance and contract work.
- Explore and learn the latest JavaScript tech stacks by building side projects.

Mabus Agency, Web & Mobile Software Engineer   2015 - 2016
- Converted mockups into functional and responsive WordPress websites while collaborating with designers and technical leads.
- Created cross platform mobile applications using Ionic Framework which were published to Apple App Store and Google Play Store.
- Introduced AngularJS, Git, SCSS, and local WordPress theme development to agency.
- Built customer survey system with daily reporting using Node.js, AngularJS, and Firebase. Incorporated lead generation with MailChimp.
